

NEW REPAIR & SYSTEM TEST CAPABILITY

CCX17 and MAGELIS

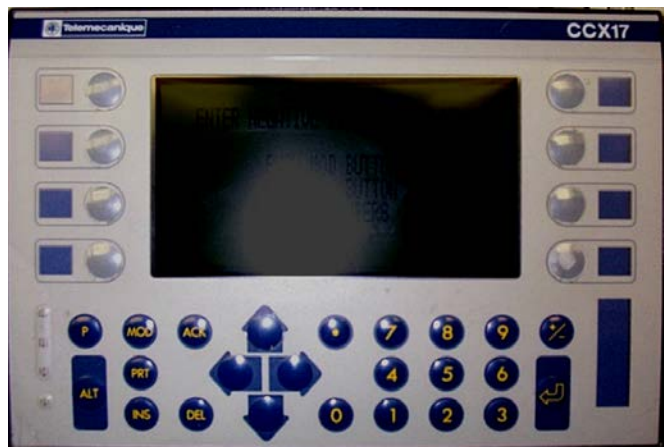

Technical Bulletin

This is a repair capability update for the CCX17 and Magelis range of Man-Machine Interfaces. Enhanced testing capabilities have recently been completed for both of these. Using special software K+S is now capable of programming these terminals offline from a standard PC, thereby reducing complexity and ensuring a positive repair outcome.

Both interfaces are fully tested for proper communications, full key functionality, and complete processing capabilities. In addition, all the internal power-up diagnostics are still performed and simply confirm the new enhanced testing capabilities.

These panels are very common and can be found in many industrial applications where Modicon PLC equipment is used. They are commonly used with the TSX Micro and Premium systems running PL7 software.

Update: Man-Machine Interfaces

CCX 17 MAN-MACHINE INTERFACE

MAGELIS MAN-MACHINE INTERFACE

12 Month In-Service Warranty

All Units Are System Tested

No Charge Evaluation
