

NEW REPAIR & SYSTEM TEST CAPABILITY

Moog Brushless AC Servo Motors

Technical Bulletin

K+S Lawton is pleased to announce it's capability to repair and fully load test several series of Moog AC Servo Motors. Below are some examples of the models that we have repaired:

G413-404 * G414-604 * G414-904 G304-131A * G304-141A 305A-111C * 305A-121C * 306-131A

Each servo motor is carefully evaluated for physical damage. The characteristics of the magnet and windings are inspected by using specialized test equipment. The rotor and end bells are then measured for proper mechanical tolerances. Worn or defective parts are replaced or repaired. The remaining parts are then cleaned & the motor is reassembled. It is then fully load tested to specifications using K+S's specially developed hydraulic load test stand.

12 Month In-Service Warranty

All Units Are System Tested

No Charge Evaluation
